PROFESSIONAL SUMMARY

Applied AI and Software Engineer taking **Generative AI (GenAI) agents from stakeholder discovery to governed production deployment.** Led 3 enterprise GenAI agents in regulated banking, associated with $1.3M in audited annualized efficiency benefits. Now building **customer-facing products** at OPENLANE with an AI-first workflow: Claude Code for codebase reasoning, OpenAI Codex for implementation.

WORK EXPERIENCE

OPENLANE

AI-First Software Engineer Aug 2026 - Present

- **Shipped 12+ dealer-facing features** and closed **50+ Linear tickets** across React/TypeScript and .NET by running an AI-first workflow (Claude Code for codebase analysis and implementation planning, Codex for execution) and partnering with Product, UX, Customer Success, and dealers from discovery and demos through release and post-launch adoption.
- **Cut investigation time** for customer-reported production failures **from 2–3 hours to ~20 minutes** by integrating Honeycomb with Codex via MCP to analyze distributed traces, identify failing spans, and compare them against successful execution paths.
- **Saved an estimated 2 hours** of impact analysis per feature by architecting a team-adopted, AI-queryable knowledge graph across **15 repositories** with Graphify, mapping cross-service endpoints and downstream dependencies. Built a knowledge-layer agent that answers engineering questions from normalized evidence tables with answer-level confidence scores, kept current through automated repository sync.
- **Reduced requirements ambiguity and engineering rework** by developing custom AI skills adopted by Product and Engineering leadership, enabling platform capability discovery, cross-repository dependency analysis, and translation of business requirements into engineering-ready tickets.

KBC GROUP (Banking & Insurance)

AI Software Engineer (Technical Lead), GenAI & Agentic Systems Jul 2025 - Jul 2026

- **Owned end-to-end delivery of 3 production GenAI agents** as technical lead, with **€1.2M+ ($1.3M)** in audited annualized efficiency benefits and access for **12,000+ employees**, from stakeholder discovery and design through evaluation, deployment, and adoption with Finance and Compliance teams; **contributed to 7 enterprise agentic AI cases**.
- **Established production AI evaluation and governance safeguards**, including LLM-as-judge assessments, golden-question benchmarks, evaluator agents, prompt-quality checks, human-in-the-loop approvals, and audit trails, supporting controlled releases aligned with EU AI Act and DORA.
- **Pioneered an enterprise agentic AI use case** on an internal Claude Code and AWS Bedrock stack, leading solution design and building custom Python logic, reusable skills and tools, multi-model routing (Claude via Bedrock, Gemini, Azure OpenAI), SharePoint, Confluence and ServiceNow connectors, and a 3-stage RAG pipeline over **10,000 documents**.
- **Automated compliance breach detection** across **~100 portfolio files daily** using Power Automate and SharePoint Lists, covering ingestion, normalization, validation, and classification; handled **~70%** of encountered breach cases, achieving **~95% classification accuracy** on labeled evaluation cases.
- **Cut monthly CFO and management report preparation from ~3 days to ~4 hours** by building a Microsoft Copilot Studio agent for Group Finance that flags outliers across multi-entity financial data.
- **Eliminated ~40% of manual information lookups** with an enterprise RAG-powered knowledge assistant across **~5,000** SharePoint and Confluence documents, combining semantic retrieval, keyword extraction, and cross-source matching to surface relevant content and resolve overlaps.
- **Led production delivery across DEV/ACC/PROD**, including GitHub CI/CD, access governance, rollbacks, and incident response, and contributed to model selection and token optimization that lowered inference costs by **~30%**; **mentored 2 engineers**.

Software Engineer Sep 2024 - Jul 2025

- **Delivered 17 high-priority features** ahead of ECB deadlines, building RESTful APIs, CI/CD pipelines, and dependency-aware regression tests across DEV/ACC/PROD using Jenkins, Maven, Docker, Oracle, and H2 to validate interconnected contracts and trigger execution sequences.
- **Built a OneSumX nightly ETL pipeline** processing **~2M contract records** for the migration to a new regulatory reporting platform, implementing automated ingestion, error handling, and Oracle SQL/XML triggers to ensure reliable ECB reporting.
- **Engineered Java and SQL ETL pipelines** with the Liquidity, ALM, Solvency, Credit Risk, and Treasury teams for IFRS9 and regulatory reporting across **10+ legal entities**, translating business rules into data enrichment, validation, and schema mappings.
- **Refactored a 30K-line Java calculation engine**, modularizing **18 interdependent trigger handlers** while consolidating contract-level processing across departments; resolved execution dependencies, schema inconsistencies, and backward-compatibility issues to preserve calculation integrity.

LUZMO (SaaS BI Analytics)

Technical Support Engineer Mar 2023 - Aug 2024

- **Partnered with customers, Product, and Engineering** to translate business requirements and technical feedback into customer-facing features for a SaaS platform serving **1,200+ users**, contributing hands-on to implementation, API integrations, testing, and production releases.
- **Resolved 200+ high-priority customer production incidents** across data ingestion pipelines, API integrations, and customer environments using AWS CloudWatch, systematic debugging, and root-cause analysis.
- **Designed real-time observability dashboards** tracking **25+ operational KPIs**, with automated alerting and threshold-based monitoring to improve incident detection and service reliability.
- **Authored 35+ technical playbooks and API runbooks**, standardizing troubleshooting and improving self-service issue resolution.

SKILLS

AI & Agentic Engineering: Agent Orchestration, Multi-Agent Systems, RAG, Tool Calling, MCP, Prompt Engineering (System Instructions, Prompt Templates & Variables), Context Engineering, Knowledge Graphs, Custom Agent Skills, LLM Evaluation (Golden Sets, LLM-as-Judge), AI Guardrails, LangChain, LangGraph
Programming & Full-Stack: Python, TypeScript, Java, SQL, React.js, .NET, Node.js, Spring Boot
AI Platforms & Developer Tools: Claude Code, OpenAI Codex, AWS Bedrock, Azure OpenAI, OpenAI API, Microsoft Copilot Studio, Power Automate, Azure AI Foundry
Cloud & Production Engineering: AWS, Azure DevOps, Docker, Jenkins, Git, CI/CD, Distributed Tracing, Honeycomb
Databases & APIs: PostgreSQL, Oracle, MongoDB, REST APIs, OpenAPI, Swagger
Languages: English, Russian, Azerbaijani; Turkish (B1), French (B1)

EDUCATION

KU Leuven

Master of Science in Information Management, Software Engineering (Cum Laude)
Bachelor of Engineering Technology, Software Engineering & ICT, Smart Electronics
Recognition: Best Data Visualization, Data 4 Good challenge; Panel Speaker, AI/GenAI event at Google Brussels
