PROFESSIONAL SUMMARY

Applied AI and Software Engineer taking **Generative AI (GenAI) agents from stakeholder discovery to governed production deployment**. Led 3 enterprise GenAI agents with $1.3M in audited annualized efficiency benefits. Now shipping **customer-facing products** at OPENLANE using Claude Code and OpenAI Codex.

WORK EXPERIENCE

OPENLANE

AI-First Software Engineer Aug'26 – Present

- **Shipped 12+ dealer-facing features (50+ Linear tickets)** across React/TypeScript and .NET with an AI-first workflow (Claude Code and Codex), partnering with Product, UX, Customer Success, and dealers from discovery to adoption.
- **Cut trace investigation** of customer-reported bugs and backend failures **from 2–3 hours to ~20 minutes** by connecting Honeycomb to Codex via MCP to retrieve distributed traces and isolate failing spans.
- **Saved an estimated 2 hours** of impact analysis per feature by architecting a team-adopted Graphify knowledge graph of cross-service dependencies across **15 repositories**, queried by a confidence-scored knowledge-layer agent.
- **Reduced requirements ambiguity and rework** with custom AI skills, adopted by Product and Engineering leadership, that surface platform capabilities and turn business needs into engineering-ready tickets.

KBC GROUP (Banking & Insurance)

Software Engineer (Technical Lead), GenAI & Agentic Systems Aug'25 – Aug'26

- **Owned end-to-end delivery of 3 production GenAI agents** as technical lead, from stakeholder discovery through evaluation, deployment, and adoption with Finance and Compliance, with €1.2M+ ($1.3M) in audited annualized efficiency benefits for 12,000+ employees; contributed to 7 enterprise agentic AI use cases.
- **Gated production releases** with an LLM-as-judge evaluation framework (golden-question benchmarks, evaluator agents), system-instruction and prompt-quality checks, guardrails, human-in-the-loop sign-off, and audit trails aligned with EU AI Act and DORA.
- **Pioneered agentic AI** on an internal Claude Code and AWS Bedrock stack, leading solution design and building custom Python logic, multi-model routing (Claude via Bedrock, Gemini, Azure OpenAI), reusable skills and tools, connectors for SharePoint, Confluence, and ServiceNow, and a 3-stage RAG pipeline over **10,000 documents**.
- **Automated breach detection** across **~100 portfolio files daily**, covering ~70% of encountered breach cases at ~95% accuracy against labeled data, with a compliance agent built on Power Automate and SharePoint Lists.
- Shortened Group Finance's monthly CFO report preparation **from ~3 days to ~4 hours** with a Copilot Studio outlier-monitoring agent analyzing multi-entity financial data.
- **Eliminated ~40% of manual lookups** with a RAG knowledge assistant over **~5,000** SharePoint and Confluence documents, combining semantic retrieval, keyword extraction, and cross-source matching.
- **Led production delivery across DEV/ACC/PROD** (GitHub CI/CD, access governance, rollbacks, incident response), helped cut inference costs **~30%** through model selection and token optimization, and **mentored 2 engineers**.

Software Engineer Sep'24 – Jul'25

- **Delivered 17 high-priority features** ahead of ECB deadlines, building REST APIs, CI/CD pipelines, and dependency-aware regression tests (Jenkins, Maven, Docker, Oracle, H2).
- **Built a OneSumX nightly ETL pipeline** processing **~2M contract records** for a regulatory-reporting migration, with automated ingestion, error handling, and Oracle SQL/XML triggers for ECB reporting.
- **Engineered Java and SQL ETL pipelines** with the Liquidity, ALM, Solvency, Credit Risk, and Treasury teams for IFRS9 reporting across **10+ legal entities**, translating business rules into data enrichment, validation, and schema mappings.
- **Refactored a 30K-line Java calculation engine**, modularizing **18 interdependent trigger handlers** during a cross-department consolidation; resolved execution dependencies, schema inconsistencies, and backward-compatibility issues to preserve calculation integrity.

LUZMO (SaaS BI Analytics)

Technical Support Engineer Mar'23 – Aug'24

- **Partnered with customers, Product, and Engineering** to translate business requirements and technical feedback into customer-facing features for a SaaS platform serving **1,200+ users**, contributing hands-on to implementation, API integrations, testing, and production releases.
- **Resolved 200+ high-priority customer production incidents** across data ingestion pipelines, API integrations, and customer environments using AWS CloudWatch, systematic debugging, and root-cause analysis.
- **Designed real-time observability dashboards** tracking **25+ operational KPIs**, with automated alerting and threshold-based monitoring to improve incident detection and service reliability.
- **Authored 35+ technical playbooks and API runbooks**, standardizing troubleshooting and improving self-service issue resolution.

SKILLS

AI & Agentic Engineering: Agent Orchestration, Multi-Agent Systems, RAG, Tool Calling, MCP, Prompt Engineering (System Instructions, Prompt Templates & Variables), Context Engineering, Knowledge Graphs, Custom Agent Skills, LLM Evaluation (Golden Sets, LLM-as-Judge), AI Guardrails, LangChain, LangGraph
Programming & Full-Stack: Python, TypeScript, Java, SQL, React.js, .NET, Node.js, Spring Boot
AI Platforms & Developer Tools: Claude Code, OpenAI Codex, AWS Bedrock, Azure OpenAI, OpenAI API, Microsoft Copilot Studio, Power Automate, Azure AI Foundry
Cloud & Production Engineering: AWS, Azure DevOps, Docker, Jenkins, Git, CI/CD, Distributed Tracing, Honeycomb
Databases & APIs: PostgreSQL, Oracle, MongoDB, REST APIs, OpenAPI, Swagger
Languages: English, Russian, Azerbaijani; Turkish (B1), French (B1), Dutch (A2)

EDUCATION

KU Leuven

Master of Science in Information Management, Software Engineering (Cum Laude)
Bachelor of Engineering Technology, Software Engineering & ICT, Smart Electronics
Recognition: Best Data Visualization, Data 4 Good challenge; Panel Speaker, AI/GenAI event at Google Brussels
